DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 11-16 are drawn to a method of selecting an image characterized by generating a histogram of each input image until a histogram is determined to match an image profile.
- II. Claims 17-20 are drawn to a method of detecting an image characterized by storing an image having an image metric matching a predetermined image profile.
- III. Claims 21-23 are drawn to a method of detecting an image characterized by indicating a match with an image profile if the rate of change of an image metric for two images sampled at different points time matches a predetermined condition.
- IV. Claims 24-25 are drawn to an image capture apparatus characterized by a histogram unit for generating an image metric from captured image data and a memory unit for storing the image data when the image metric meets a predetermined condition.
- V. Claims 26 are drawn to a method of creating an image profile for image selection characterized by determining one or more thresholds based on image metrics that differ between two images by at least a predetermined amount.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-VI are related as subcombinations disclosed as usable together.

The subcombinations are distinct from each other if at least one subcombination is separately usable. In the instant case, each invention has separate utility because each

invention can operate, either independently or in combination with other known methods and apparatus, according the claimed limitations which uniquely characterize each invention as indicated above, without requiring the limitations which characterize the other inventions as indicated above. See M.P.E.P. § 806.05(d).

Because these inventions are distinct for the reasons given above, requiring separate consideration and search, restriction for examination purposes as indicated is proper.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103 of the other inventions.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).
